Prediction Result: Tumor Detected: Pituitary

Confidence: 99.91%

MRI Scan:

Trusted Advices For You:

You have been diagnosed with a Pituitary Tumor. Pituitary tumors affect hormone production and may cause vision or endocrine issues. Most are benign and treatable.

Medical & Treatment Options:

- Endocrinological evaluation is crucial to assess hormone imbalance.
- Treatment may involve medications, surgery, or radiation therapy.
- Regular visual field tests and MRI scans.

Self-Care & Monitoring:

- Take medications consistently as prescribed.
- Monitor symptoms like fatigue, mood changes, or weight fluctuations.
- Maintain a log of any visual disturbances or headaches.

Note: Hormone-producing tumors may be managed with lifelong medication and follow-up.
